Index terms, selected from the *Thesaurus of Psychological Index Terms*, represent the literature covered in the last six issues of *PA*. Subject matter content determines the specific terms used and, thus, not every thesaurus term will appear in every index. See and See Also references are present to direct the user to the preferred terminology or related areas of interest. Index phrases are alphabetically arranged under the appropriate index terms and represent a concise statement of the article's content or, when appropriate, identify the independent and dependent variables described in the material as well as the subject population. Style changes such as the increased use of abbreviations, the elimination of some hyphens, and the decisions to capitalize Black and White when referring to subject population will be reflected in some inconsistencies and may affect alphabetical order of phrases.
